

# HEMP-ZOO

Full Spectrum CBD Oil

[www.chronozoo.com](http://www.chronozoo.com)  
301-365-0192

## DOSAGE

**1500 mg=30 ml** (50 mg of CBD per ml)

Dosage starts at 1-2 mg/kg. The following chart is based on 2 mg/kg.

In smaller pets, we recommend a diabetic/tuberculin syringe for precise dosing.

Dog/Cat Weight (lbs)	Standard Dose
5	0.1 ml
10	0.2 ml
20	0.4 ml
30	0.6 ml
40	0.8 ml
50	1 ml
60	1.2 ml
70	1.4 ml
80	1.6 ml
90	1.8 ml
100	2 ml

No additives, sweetener, flavorant or palatant added

## HOW CBD WORKS

Cannabis, hemp and marijuana, while from the same family, are uniquely different. Cannabis is a family of plants with two different classifications, Indica and Sativa. Marijuana and hemp are species of the Cannabis family that share properties but re structurally and functionally unique.

CBD is one of over 100 cannabinoids found in Hemp plants and the 2nd most often found in the cannabis plant. THC in cannabis plants causes the psychoactive effects. CBD contains none of the psychoactive components and will not cause euphoria or a "high".

CBD oil arouses cannabinoid receptors, CBD1 and CBD2, which naturally occur in humans and animals. These receptors are multi-functional. They are thought to provide an important role in calmness, reducing anxiety and to be anti-inflammatory. Multiple articles have been written to support their use in aiding the treatment of arthritis pain, seizures, anxiety, nausea and vomiting (See the article by McAuliffe).

Each pet may react differently to CBD. While toxicity is nearly non-existent at dose up to 10-100x recommended doses, each pet should be observed closely. If any adverse symptoms are seen, minimize the dose. If indications continue, you may increase the dose accordingly, until signs or indications improve, with the knowledge that toxicity is rare.

Like most supplements, Efficacy may either be dose dependent or not effective at all. Of course, always heed the advice of your veterinarian.
